Abstract (en)

[origin: EP1081355A2] The support (7) is connected to a casing (6), e.g. the crankcase of the engine and holds several additional units. The support is formed to guide cooling fluid from a cylinder casing (4,5) to a cooler for the cooling fluid. Sections of the support preferably run between the cylinder casings and have connection sockets (10,11) for pipelines formed as inputs (14,15) for the cooling fluid.
