Abstract (en)
[origin: EP1081434A1] The rectangular flow-duct (18) has several nozzles (24) positioned on the two opposite-facing walls (26) defining the flow-duct and lying on one plane (22). The flow duct has a transition part (20) from a combustion chamber (12) of the combustion plant to the flue gas outlet (10). At least one wall section (28) of the two facing walls have first nozzles (24a) in a row and form an angle between the wall and jet.
