Abstract (en)

[origin: EP1081437A2] The appliance door has an outer pane (3) joined to at least two support elements. Two of the support elements each consist of a holder element (7) formed of a cohesive mold part with a number of at least two separate support surfaces (72,74,79) in which a door-pane is each placed. At least one of the support surfaces of each holder element is positioned between the two facing insides of the support elements. At least one of the support surfaces of each holder element is positioned on the front sides of the support elements facing away from the outer pane
