Abstract (en)

A method for inspecting installations or objects located at spread locations, wherein the installations or objects are each provided with at least one transponder. An interrogation device carried along or otherwise transported by a person who is to inspect the installation or the object can activate a transponder when the interrogation device is located a short distance from the transponder. The data transmitted by the transponder, comprising at least a unique code identifying the installation or the object or a part thereof, are recognized. After recognition, an associated inspection protocol is made available and data relating to the inspection can be entered. <IMAGE>
