Abstract (en)
[origin: EP1081670A2] A central vehicle-information management center gathers individual pieces of information on the state of a vehicle on a real-time manner by: acquiring and gathering pieces of information on the position of the vehicle from a reflection signal reflected by an artificial satellite as a result of reflection of a position signal transmitted by an antenna provided on the vehicle to the artificial satellite; and acquiring and gathering a signal reflected by the artificial satellite as a result of reflection of a signal used for representing information on control of the vehicle or information on conditions of vehicle parts and transmitted from the antenna to the artificial satellite or transmitted by the vehicle through a wireless-communication apparatus such as a DSRC (Dedicated Short Range Communication) device or a cellular phone. As a result, with such a central vehicle-information management center, it is possible to provide a method and an apparatus, which can be used for gathering information on a vehicle and capable of continuously collecting detailed information on the present state of a vehicle with a high degree of reliability and in a real-time manner. <IMAGE>
