Abstract (en)

[origin: WO9960880A1] The invention relates to a method for producing adhesive closing parts (12) having adhesive closing elements (12) made of plastic materials, said elements interacting with corresponding adhesive closing elements of a second adhesive closing part and forming an adhesive closure. In view of the fact that the adhesive closing part (10) having the adhesive closing elements (12) is fitted at least in part with a coating (20), the thickness of which has been chosen in such a way that it ensures subsequent formation of an adhesive closure, adhesive closures with enhanced application possibilities can thus be produced.
