Abstract (en)

[origin: WO9960879A1] The invention relates to an adhesive closing part, especially for foaming upholstery parts of car seats during production of the latter, comprising adhesive elements (10) arranged on one side for connection to corresponding adhesive elements of another adhesive closing part by forming an adhesive closure and connecting elements on the other side of the adhesive closing part for producing a connection to the corresponding foam material. A reliable and high-strength connection to the foam material is achieved due to the fact that the connecting elements consist of an adhesive medium, especially a fluorine gas, applied at least on the other side of the adhesive closing part.
