Abstract (en)

[origin: WO9960993A1] The method and compositions of this invention provide a means of removing dyes from keratin fibers under relatively mild conditions. This dye removal is accomplished through the use of compositions containing bicarbonate salts in conjunction with oxidizing agents, such as hydrogen peroxide to remove oxidative dye molecules not only from the surface of dyed keratin fibers, but also dye molecules deposited within the cortex of the fiber. The present invention is especially useful to people who have dyed their hair and wish to return their hair to its original color or for people who wish to have variegated hair coloring.
