Abstract (en)

[origin: WO9947214A1] A removable grip (1) to fit over an existing grip of a handheld sporting article of the kind substantially encircled by the hand or hands of a user. The grip (1) includes well defined indentations (13 to 21) to dictate the exact position of the hand or hands on the removable grip (1). One of the indentations (13 to 21) corresponds to each digit of the hand or hands required to abut the removable grip (1) and each indentation (13 to 21) is dimensioned to accommodate the corresponding digit. The removable grip (1) is formed of resilient material and has an internal cavity (4) to receive the existing grip. The cavity (4) is provided with a longitudinally extending refastenable joints formed by two opposed free edges (9, 10) and an interconnecting mechanism (11) operable to engage the free edges (9, 10) and draw them toward each other to resiliently stretch the removable grip (1) around the existing grip.
