Abstract (en)
[origin: WO9961713A1] A faucet (29) of the type which has an adjustable delivery spout (14) and includes a mixing cartridge (21) with single control lever (25) installed in a cavity or recess (35) available on the faucet. The recess for installation of the cartridge in the valve is formed in a component (11) of the faucet that is integrally formed with the spout (14). The component (11) in which the cartridge is installed has a two-way rotating hydraulic coupling to the fixed body (1) which is operably connected to supply pipes. As the spout (14) is adjusted about the fixed body (1), the lever (25) is carried by the component (11) to retain the same orientation of the lever (25) with respect to the spout (14).
