Abstract (en)

[origin: WO9955067A1] The present invention relates to a method for submitting the user profile of a client entity which is being registered or has already registered itself with a management system of a telecommunications network. In this kind of system, for each client entity is formed at least one user profile that is stored ready for retrieval by the telecommunications network performing said registry and that during the registration of said client entity is retrieved for the use of said telecommunications network management system. According to the invention, at least one user profile is stored in the client entity to be registered and is then retrieved directly from the client entity to be registered in conjunction with the registration performed by said client entity. The user profile can be stored, e.g., in a smart card suited for attachment to the client entity to be registered.
