Abstract (en)
The invention relates to a portable cork-screw provided with a conventional spiral-shaped extraction means (2) which is articulated to the body in a position offset towards one of its extremities, said body having a C-shaped cross-section, and having in one of its walls a circular recess with two cutting protuberances (7) in spaced longitudinal positions, said protuberances being usable as a crown cork lifter, and presenting at said extremity which is closer to the spiral a pair of arms (4, 5) which are hinged to a same pin (6) and having substantially different lengths; the two arms are provided at their respective extremities with stepped portions so that they can bear to the upper edge of the neck (9) of the bottle; the longer arm (5) has a wide opening traversed by the shorter arm (4). <IMAGE>
