Abstract (en)

[origin: EP1083262A2] The method involves assigning each transport wagon (1) with a base conveyor belt (7) moving in the longitudinal direction and a spaced overburden conveying belt (15) connected by a transfer conveyor belt projecting over one end of the wagon. The overburden is transported directly behind a rear end of the wagon to be loaded onto the transfer conveyor belt of the adjacent wagon. The transfer conveyor belt leads directly to the base conveyor belt of the wagon to be loaded. An Independent claim is included for a transport wagon for use in the method.
