Abstract (en)

[origin: EP1083269A2] The strip-shaped laying aid (10) is for supported and under-ventilation of slabs on terraces, balconies etc. It comprises a strip (12) of thermo-plastics, of which the upper side facing the slabs bears projections (14) acting as slab support bearings. On the projections the corner areas of the slabs are placed in a predetermined pattern at a parallel distance from the ground. In the closed upper side of the projections facing the slabs groove-shaped cavities (16) are formed for alignment of the slabs with a predetermined seam spacing. From the upper side of the foil strip, support projections (36) emerge spaced from the projections (14) acting as support bearings.
