Abstract (en)
[origin: EP1083288A2] Two or three columns (12,13) are involved and a left-luggage locker (11) is screwed, welded or riveted to a module column section (16). Two module column sections half-extend over the height of a left-luggage locker module (17), with one section (16) facing upwards and the other section (17) facing downwards. The one section of a first module can be fitted on the other section of a laterally adjacent second module, so that in particular the two sections together extend over the height of the module. Blind column sections (16) are arranged between the module column sections of outside columns.
