Abstract (en)  
[origin: EP1083585A2] Housed in a casing (11) are a U-shaped yoke, a permanent magnet, a coil and a cutout blade kept ready for trip-out by being pulled against the yoke by the permanent magnet against the force of a spring. The cutout blade is coupled to a pin (19) jutting out from the casing that acts on a latch position in the switch latch of a fault current safety switch. A magnetic plate acts as partial shielding (20) round the casing.
