Abstract (en)  
[origin: EP1083628A1] Connection device for a flexible printed circuit comprising a contact equipped with a termination (20) for connection to a supplementary contact, a central elongated part (21) which forms the floor and an insulation-piercing connection part (22) destined to come into contact with a track of a flexible printed circuit and comprising a housing to receive the contact, for which the contact and the housing possess, more particularly, supplementary means of retention in the pre-insertion position. <IMAGE>
