Abstract (en)

[origin: US6474591B1] A device for inserting a strip of material in a dispensing machine for material wipes of the type in which the machine includes a housing, a cover, the housing having end shields that support a reel holder, and a drum with a cutting device. The drum includes a cam associated with a start and return spring, a protection flap being located in front of the drum along with a pressure roller resting against the drum. The protection flap has an upper extension forming a support frame devised to accommodate a hinged secondary flap and a swivelling shaped plate is located behind the drum and capable of supporting a service roll that is being used up. The swivelling shaped plate cooperates with a mechanism capable of locking the secondary flap in position when a spare roll (RR) is being loaded and the service roll (RS) is positioned so that it can be used up.
