Abstract (en)

[origin: WO9962785A1] The invention concerns a device wherein the lid (2), when it is in closed position, closes the tubular guide (1) top opening. The nozzle (3) fixed by its base to a container or bag containing the liquid, is engaged in the guide (1) and fixed thereto by its base by bayonet fitting (21, 22) enclosing between the two parts the support neck (5). By pivoting about criss-cross ribs (10) the lid (2) tilts over such that its cam surface (13), then its locking surface (20) press laterally on the nozzle (3) and maintain the lips (19) in open position.
