Abstract (en)

[origin: DE19824725A1] The invention relates to an assembly device (46) for fixing means (12) for a strip of roofing material (24, 134), wherein the assembly device (46) entrains retaining elements (26) and fixing elements (28) and a first device (54) to place the retaining elements (26) of the top side of the strip of roofing material (134) in the position (160) envisaged for the fixing means (12), in addition to a placement device (52) for anchoring the fixing means (12). In order to quickly and easily assemble the fixing means with a covering element and connect the latter to the strip of roofing material in a water-proof manner, the assembly device (46) is provided with a third magazine (74) for the covering elements (30), a third device (58) serving to locate the covering element (30) in the same position (160) within the trajectory (76) of the placement device (52) and a welding apparatus (90) to weld the covering elements (30) to the strip of roofing material.
