Abstract (en)

[origin: EP1084841A1] In a printing plate guiding device, a guide plate (161) is provided at a location near a upper plate cylinder (12) at which a printing plate with a bent portion at an end portion is attached in order to guide a discharged printing plate (2) discharged from the upper plate cylinder (12). An end portion of the guide plate (161) confronting to a peripheral surface of the upper plate cylinder (12) is located at a downstream side along a discharged printing plate rotating direction for discharging the discharged printing plate (2) from the upper plate cylinder (12) with respect to a location for releasing the bent portion of the discharged printing plate (2) by the plate cylinder (12). A guiding roller (162) is rotatably provided at an end portion of the guide plate (161) confronting to the peripheral surface of the upper plate cylinder (12) in order to discharge the discharged printing plate (2) certainly. <IMAGE>
