Abstract (en)

[origin: EP1084977A2] The sheet transport method has the individual sheets transported one after the other to a collection point defined by a stop mechanism (5), for forming a sheet stack (9), with transport of the assembled sheet stack from the collection point while a sheet (10,11) for the next sheet stack is being transported to the collection point, so that it overlaps the assembled sheet stack. An Independent claim for a sheet transport device is also included.
