Abstract (en)

[origin: EP1085128A2] The device has a runway (2), preferably a stretch of profile rails (1), and at least one suspended wagon (3), which is moved to and fro along the runway using a drive unit (4). The drive unit is formed as a compressed air piston motor (6) supplied with compressed air from a store that is carried with the wagon. Two or more wagons may be provided, where one wagon has the compressed air store and the other wagon carries a load to be transported.
