Abstract (en)
An insulating enbloc comprises a first and a second block (2, 3) and an insulating body (4) interposed between said blocks (2, 3). The insulating body (4) is rigidly engaged to the blocks (2, 3) by means of mechanical coupling elements (5) fastened to the insulating body (4) by means of riveting and provided with coupling portions (Sb) for snapping or forced sliding engagement into respective coupling seats (6) readied in the respective blocks (2, 3). In the realisation of the enbloc (1) the mechanical coupling elements (5) are first made fast to the insulating body (4) and then the latter is simultaneously associated to the blocks (2, 3) with a single operation. <IMAGE>
