Abstract (en)  
[origin: EP1085150A1] The spring arrangement has a slider (11) guided in a lock casing (1), in which at least one carrier (6) engages a follower (3) as a rack gear. Two opposing springs (12,16) are supported at one end to the casing or a fixed casing part and at the other end to the slider or a component fixed to the slider. The springs are concentrically arranged and generated independent and opposing tension and compression forces on the slider.
