Abstract (en)

[origin: EP1085162A2] The sealing assembly (100) incorporates a D-shaped seal with the convex side facing downwards and engaging a strip or rail (S) fastened to the floor (B). A projection on the otherwise flat side of the D-shape engages in a reentrant groove in a rigid support strip (3). The support strip has sealing strips at the sides engaging against the sides of a top-hat-section rail (2) set in a rectangular groove in the bottom edge of the door (T). The top-hat-section rail is held in place by nails (N) driven up into the bottom of the door through its outward-facing flanges.
