Abstract (en)
[origin: EP1085163A2] The blind of each separately adjustable hanging segment is connected to its own adjustable swivel member (10, 11) which in turn are connected to a connecting element which is connected to a swivel body (4) which is coupled to the adjusting device which moves between two end stops. Two overrunning elements acting on the swivel member (11) can be switched off and on respectively by control elements connected to the second swivel member (10). The swivel members can be plate wheels mounted in succession on a common swivel axis and the connecting element can be a cone wheel (9).
