Abstract (en)

[origin: EP1085553A1] Process consists on cutting off from a band pairs of symmetrical conductive elements (2,3) with connecting parts (2b,3b) around the axis and contacting parts (2a,3a) extending externally. Then the assembly is folded (I) in a U-shape with connecting part projecting downwards and contacting parts projecting upwards. Finally plastic insulator (7) is placed (II) around a pair of conductive elements. Independent claims are also included for a fuse carrier and a whole band of fuse carriers obtained by this process.
