Abstract (en)  
[origin: EP1085618A1] The pin connection system functions between a first base (1), which can be a rear wall with a blade strip, and a second base (3), on which a corresponding spring strip is fitted. For centering and encoding, on the first base a vertically extending guide pin (6) is arranged on which is fitted an encoding key (7). On bringing together the first and second bases, the encoding key fits into an encoding box (8) with a corresponding counter encoding key (11). The guide pin is clamped by a spring (10) in the encoding box. Centering of the guide pin in the encoding box is by means of working together of the encoding key and the counter encoding key.
