Abstract (en)

A current conducting contact pin (1) comprising a housing (4), at least one pin (5) and a spring element (6). The pin (5) has an external end extending beyond the housing (4) and an internal end located inside the housing (4). Means are provided for restricting the extension of the pin (5) outside the housing (4). The pin (5) is slidably located in the housing (4) and the spring element (6) forces the pin (5) to be in its outermost position. The contact pin is characterised in that the external end of the pin (5) comprises a seat (8) in which a ball (7) is rotatably mounted. <IMAGE>
