## Abstract (en)

[origin: WO9964046A1] Disclosed are novel multi-binding compounds (agents) which bind 5-HT<sub>3</sub> receptors. The compounds of this invention comprise a plurality of ligands each of which can bind to such receptors thereby modulating the biological processes/functions thereof. Each of the ligands is covalently attached to a linker or linkers which may be the same or different to provide for the multi-binding compound. The linker is selected such that the multi-binding compound so constructed demonstrates increased modulation of the biological processes mediated by the 5-HT<sub>3</sub> receptor.
