Abstract (en)

[origin: DE19825858A1] In a railway car for a rail vehicle, a railway car body cell is provided with connecting means for a travelling mechanism that is arranged under said railway car. In order to obtain a simplified point of intersection between the railway car body cell and the travelling mechanism, an intermediate frame (8, 16.1) is provided which is connected to the railway car body cell (1) in a rigid manner and which is supported on the travelling mechanism (2-6).
