Abstract (en)

[origin: EP1086750A2] A device for sucking off paint mist by using paint mist separator filters (5) and a suction fan (7) has an oblong casing (1) on wheels. The filters with pocket filters behind them are fitted on the casing's side opened by doors (3,3'). During spray painting operations the opened side of the casing faces any paint mist that occurs. Because of the sucking operation of the suction fan paint mist is pulled through the paint mist separator filter and filtered by it.
