Abstract (en)  
A stapler is provided which allows confirmation of the remaining number or leg length of staples stored in a case from the outside. A plurality of through holes 15 is opened along a guide rail 20 in the case 10 in the walls 10B, 10C of the case 10 of the stapler. In this case, confirmation of the position of the staple pushing part 43 is facilitated by the provision of a mark 47 on the staple pushing part 43. The remaining number of staples 30 is determined based on the position of the staple pushing part 43. It is possible to confirm the leg length of the staples 30 from the longitudinal through hole 15 above the staple ejecting mouth 10D. <IMAGE>
