Abstract (en)

A description is given of a wrapper (1) for packaging a collection of identical thin, flat objects (2m) stacked parallel to each other, which comprises: a) a containment bag (3) of flexible packaging material able to contain inside itself the said objects (2m) stacked parallel to each other, against whose external lateral surfaces it presses, the containment bag (3) being open at at least one end (3e), and having an axial length greater than the length (L) of the stack (4) of the said objects (2m), in such a way as to end, at the said at least one open end (3e), in a ring-like part (5) projecting beyond the said stack (4); and b) a length of adhesive tape (6) applied to the external surface of the said containment bag (3) all the way along its length (L) parallel to the longitudinal axis (Z-Z) of the said stack (4) of objects and ending in a portion (6r) that covers an area of the said ring-like part (5). <IMAGE>
