Abstract (en)  
[origin: EP1087076A1] The shelter consists of a one-piece domed square cover (3) e.g. moulded from a transparent or translucent plastic material with a guttering (21) round its edge, mounted on a supporting frame with a central tubular member (5) and radial arms (13, 15). A curved supporting leg (1) for the cover is connected by its upper end to the central member of the frame and fixed to the ground by a plate (19) on its lower end. Two or more covers can be joined together by inverted trough-section elements overlapping their adjacent gutterings, and additional covers can be fitted vertically to the edges of top covers to act as side walls. The shape of the covers allows them to be stacked on top of one another when not in use.
