Abstract (en)

[origin: EP1087087A2] A door assembly for an outside compartment in a recreational vehicle consisting of a generally upright rectangular frame member defining an access opening and a door member of a size to fit in the opening. Hinge members mount the door member on the frame for swinging movement between an open position and a closed position fitting in the opening. In the closed position of the door, the frame member and the closed door are in a flush relation with the outer wall of the recreational vehicle. The frame member and a component of the hinge assembly hide the hinge mechanism to enhance the overall appearance of the recreational vehicle. <IMAGE>
