Abstract (en)

[origin: EP1087091A2] The rubber profile and pref. hollow profile, as a safety signal transmitter and the like, has at least one locking groove (6.1,6.2) to be locked to a holder (4) especially with at least one locking projection (7.1,7.2). Part of the structure of the locking groove (6.1,6.2) is of a harder material than the other part (9.2) of the locking groove section. The harder material section (9.2) is coextruded with the base body (2) or is produced separately for bonding to the body. At least one locking projection (7.1,7.2) is angled against the direction which would pull the profile out of its mounting.
