Abstract (en)
[origin: WO9966224A1] The present invention relates to an articulated coupling for transmitting rotating torque between aligned or intersecting shafts, mainly in the drive shafts of automobile vehicles. The articulated coupling includes an articulation housing (2) for receiving an articulation head (9) therein which is capable of axial displacement and of pivoting. The articulation housing (2) is provided with a polygonal bore (8) which is coaxial to the housing shaft (3). The articulation head (9) has a rotation section (19) which is coaxial to the head shaft (10) and corresponds to the polygonal bore (8) in the radial direction, wherein said rotation section (19) narrows in the axial direction.
