Abstract (en)
[origin: EP1088774A1] The supply and discharge unit has a stationary drive (35) in the area of the main frame (2), which has at least two controllable, reversible single drives (7,7'). The drives are connected via an endless conveyor (28) with junction wheels (14,15) to a horizontal transporting device, with the first junction wheel being a component of the transporting device. The single drives are frequency controlled synchronous motors.
