Abstract (en)

The arrangement has driven control cams for the lifting motion of a lifting suction device and the drive motion of a trailing suction device. An additional pivotable control cam synchronizes the lifting and driving motions and sets the transition position of the sheet from lifting suction to trailing suction and the sheet transport height. The arrangement has a driven control cam for the lifting motion of a lifting suction device (19) and one for the drive motion of a trailing suction device (21) and an additional pivotable control cam that synchronizes the lifting motion and the driving motion. The pivotable control cam (44) sets the transition position of the sheet from lifting suction to trailing suction and the sheet transport height. The lifting and driving suction devices can be driven by separate cams.

Abstract (de)

Bei einem Hub-Schleppsaugergetriebe eines Vereinzelungsorgans - Saugkopf - einer Bogen verarbeitenden Maschine ist es vorgesehen, daß die Hub- und Schleppsauger (19,21) unabhängig voneinander gesteuert werden und daß die Höheneinstellung des Hub- und Schleppsaugers (19,21) mittels einer gemeinsamen Steuerkurve (27,28,29) erfolgt. <IMAGE>
