Abstract (en)

[origin: EP1088782A1] The device has a limiter wheel driven according to the transport speed, at least one element that stops the limiter wheel if the revolution rate is too high as a result of an inertial force and a device for remote triggering of a braking process independently of the inertial force. The device has a braking arrangement (26) acting on the limiter wheel (18) independently of the limiter wheel speed and the effectiveness of the stop element (24).
