Abstract (en)  
[origin: EP1088942A2] The unit has an operation frame (6), which is at least partly accessible from outside the plaster and has two keys. The keys are independently operable and are coupled to an operation mechanism (10-14,16,19), to open and close a drain valve. A first, larger, key (9) opens the drain valve to flush a first, larger, water quantity. A second, smaller, key (8) either closes the drain valve or releases a second, smaller, water quantity. An Independent claim is included for a flushing device for flushing a toilet.
