Abstract (en)
[origin: EP1088945A2] The insulation element (1) is made of a mineral fibre composite and is formed in plates. The element can be covered with plaster (11) and is fixed to the outer facade (8) with insulation holders (6). A marker is arranged on a larger surface to arrange each insulation holder. The markers are spaced from the edges of the plates. The markers may be formed as coloured coatings formed by local heating.
