Abstract (en)
Lock assembly consisting of a slider (3) that can be moved along a guide (2). The guide (2) is provided at one end with a bent-over section (7) consisting of a pin (8) that interacts with an opening (10) in the slider. The slider (3) can be locked in various positions with respect to the guide with the aid of a bolt-lock construction. Wings (9) are arranged adjoining the pin (8) to prevent turning of the lock assembly with respect to the object to be protected. By this means the lock assembly can be adapted to various constructions which have to be protected. <IMAGE>
