Abstract (en)

[origin: EP1089144A1] Collar (20) has a base (21) fixed to the watch housing bottom and an elastic blade (22) extending from the base to a watch push button (10) and beyond. A sprung first part (23, 24) forms a key and a return spring, while a second part (25-27) of greater flexibility enables the collar end (28) to make an electrical contact with a force that is less than that exerted on the push button.
