Abstract (en)

The present invention provides a piezo-electric/electrostrictive device including a pair of thin plate sections 12a and 12b in an opposed relation to each other, a fixing section 14 for supporting the thin plate sections 12a and 12b, and piezo-electric/electrostrictive elements 18a and 18b are provided to the pair of thin plate sections 12a and 12b respectively. The movable sections 20a and 20b respectively have end surfaces 34a and 34b in an opposed relation. Recesses 20c and 20d filled with a filler are formed at the boundaries between the thin plate sections 12a and 12b, and the fixing section 14 and the movable sections 20a and 20b. As a result, the impact resistance of the device 10 is enhanced. The present invention also relates to the method for producing such a device. <IMAGE>
