Abstract (en)
[origin: EP1089384A1] So-called fixed pluggable connectors mounted on circuit boards can transfer a significant part of the tensile forces resulting from tightening up a loose connector on to the circuit board and housing wall, via the contacts, leading to increased tensile forces during operation and reduced quality of contact of the individual contacts. The locking part (36) is provided with at least one hook (42) which is designed to anchor the locking part on the circuit board etc. and can be shifted relative to the housing (24,32) and to the insulator body (10) between two abutments
