Abstract (en)

[origin: WO0061110A1] The present invention relates to a soft icecream-type pharmaceutical formulation and a process for preparing the same. The icecream-type pharmaceutical formulation of present invention is prepared by the steps of mixing egg yolk, milk, and cocoa with stirring until the cocoa is completely dissolved in the mixture; whipping a cream until it is reduced to pulp and mixing it with the said mixture in a volume ratio of 9:1 to 5:5; adding drugs into the said mixture and blending them; and, putting them into an ice cream maker and formulating into a pharmaceutical formula. Since a soft ice cream-type-formulation of the invention has merits over conventional formulas in terms of taking preference and absorption efficacy in oral application, it can be used as an improved pharmaceutical formula for children and infants, while substituting for troches.
