Abstract (en)
[origin: WO9964301A1] The invention concerns a package consisting of a polygonal base (2) whereof one of the sides at least is extended by a first wall element (3) provided with an end flap (9), which flap is integral with a second wall element (6) which extends one adjacent side of said base (2) for maintaining the volume. The invention is characterised in that the end flap (9) and/or the second wall element (6) with which said flap (9) is integral comprise(s) a cleavable part (12, 18) delimited by precut lines (14, 17), and the means making said flap (9) integral with said second wall element (6) are arranged on said cleavable part (12, 18) solely. The package can be re-flattened by tearing the cleavable parts (12, 18).
